

T8 HO 3FT 6 LAMP HORTICULTURAL FIXTURE

Energy Saving & Lower Heat

Uses 55% less energy than 30W T12 fluorescents when used with Active Grow 14W T8 HO LED lamps, saving over \$440 in energy costs over the lifetime of the lamps.*

Sun White Spectrum

High CRI 95 full-spectrum light accentuates plant colors, making visual inspection easier. Includes additional Red and Far-Red wavelengths to boost photosynthesis rates.

No Hassle – Ballast Bypass Lamps

Lamps run directly off line voltage 120-277V. No ballasts means no buzzing, flickering, compatibility or longevity issues, giving your plants pure, uninterrupted lighting.

Wide Light Distribution

Evenly diffused 190° light distribution and a low operating temperature allow the lamps to be placed closer to plants to save space in vertical environments.

Ready to Grow

Comes complete with 6 LED tubes and 120V power cord which can also function as a daisy chain cable. Dual on-off switches allow growers to run 3 or 6 lamps.

Extra-Long Lifetime & Guarantee

Active Grow 14W T8 HO LED lamps feature an exceptional 30,000-hour lifetime. Each fixture has a 3-year limited warranty.

Active Grow Sun White Spectrum Formula

PBAR Range (280-800 nm)

Plant Biologically Active Radiation

UV 280-400 nm	Blue 400-500 nm	Green 500-600 nm	Red 600-700 nm	Far-Red 700-750 nm	Infrared 750-800 nm
0%	19%	36%	38%	6%	1%

Blue 400-500 nm

Improves overall plant health and quality including taste, aroma, color and nutrition. Helps promote plant compactness and root development.

Green 500-600 nm

Increases overall plant photosynthetic efficiency and penetrates the canopy to encourage growth of lower leaves. Makes detecting issues like pests and disease on plants easier to see.

Red 600-700 nm

Promotes plant photosynthesis and increased biomass. Essential for leaf expansion and stem growth. Helps regulate plant flowering, photoperiod and germination.

FR/IR 700-800 nm

Promotes expansion and stretching of leaves and stems. Penetrates the canopy to encourage growth of lower leaves. When used with 660-680 nm wavelengths, plant photosynthesis rates increase via the Emerson effect.
